

3, 3, 15, 16, 30.

$$15. \quad A = \begin{bmatrix} 5 & 0 & 0 \\ -1 & 1 & 0 \\ -2 & 3 & -1 \end{bmatrix}$$

其余因子为 $C_{11} = \begin{vmatrix} 1 & 0 \\ 3 & -1 \end{vmatrix} = -1$

$$C_{12} = -\begin{vmatrix} -1 & 0 \\ -2 & -1 \end{vmatrix} = -1$$

$$C_{13} = \begin{vmatrix} -1 & 1 \\ -2 & 3 \end{vmatrix} = -3 + 2 = -1$$

$$C_{21} = -\begin{vmatrix} 0 & 0 \\ 3 & -1 \end{vmatrix} = 0$$

$$C_{22} = \begin{vmatrix} 5 & 0 \\ -2 & -1 \end{vmatrix} = -5$$

$$C_{23} = -\begin{vmatrix} 5 & 0 \\ -2 & 3 \end{vmatrix} = -15$$

$$C_{31} = \begin{vmatrix} 0 & 0 \\ 1 & 0 \end{vmatrix} = 0$$

$$C_{32} = -\begin{vmatrix} 5 & 0 \\ -1 & 0 \end{vmatrix} = 0$$

$$C_{33} = \begin{vmatrix} 5 & 0 \\ -1 & 1 \end{vmatrix} = 5$$

$$\det A = 5 \cdot C_{11} = -5$$

$$\therefore \text{adj} A = \begin{bmatrix} -1 & 0 & 0 \\ -1 & -5 & 0 \\ -1 & -15 & 5 \end{bmatrix}$$

$$A^{-1} = \frac{1}{\det A} \text{adj} A = \begin{bmatrix} 0.2 & 0 & 0 \\ 0.2 & 1 & 0 \\ 0.2 & 3 & -1 \end{bmatrix}$$

$$16. \quad A = \begin{bmatrix} 1 & 2 & 4 \\ 0 & -3 & 1 \\ 0 & 0 & -2 \end{bmatrix}$$

$$C_{11} = \begin{vmatrix} -3 & 1 \\ 0 & -2 \end{vmatrix} = 6$$

$$C_{12} = -\begin{vmatrix} 0 & 1 \\ 0 & -2 \end{vmatrix} = 0$$

$$C_{13} = +\begin{vmatrix} 0 & -3 \\ 0 & 0 \end{vmatrix} = 0$$

$$16. \quad C_{21} = -\begin{vmatrix} 2 & 4 \\ 0 & -2 \end{vmatrix} = 4$$

$$C_{22} = \begin{vmatrix} 1 & 4 \\ 0 & -2 \end{vmatrix} = -2$$

$$C_{23} = -\begin{vmatrix} 1 & 2 \\ 0 & 0 \end{vmatrix} = 0$$

$$C_{31} = \begin{vmatrix} 2 & 4 \\ -3 & 1 \end{vmatrix} = 2 - (-12) = 14$$

$$C_{32} = -\begin{vmatrix} 1 & 4 \\ 0 & 1 \end{vmatrix} = -1$$

$$C_{33} = \begin{vmatrix} 1 & 2 \\ 0 & -3 \end{vmatrix} = -3$$

$$\therefore \text{adj} A = \begin{bmatrix} 6 & 4 & 14 \\ 0 & -2 & -1 \\ 0 & 0 & -3 \end{bmatrix}$$

$$\therefore \det A = 1 \cdot C_{11} = 6$$

$$\therefore A^{-1} = \frac{1}{\det A} \text{adj} A = \begin{bmatrix} 1 & \frac{2}{3} & \frac{7}{3} \\ 0 & -\frac{1}{3} & -\frac{1}{6} \\ 0 & 0 & -\frac{1}{2} \end{bmatrix}$$

30. 先减去 (x_1, y_1) 点坐标, 将三角形移至原点, 对应另外两点坐标为 $(x_2 - x_1, y_2 - y_1)$ $(x_3 - x_1, y_3 - y_1)$

此时由行列式几何解释, 可知 S_{Δ} 是以向量 $\begin{bmatrix} x_2 - x_1 \\ y_2 - y_1 \end{bmatrix}$, $\begin{bmatrix} x_3 - x_1 \\ y_3 - y_1 \end{bmatrix}$ 确定的平行四边形面积的一半.

$$S_{\Delta} = \frac{1}{2} \begin{vmatrix} x_2 - x_1 & x_3 - x_1 \\ y_2 - y_1 & y_3 - y_1 \end{vmatrix}$$

$$\text{令 } A = \begin{bmatrix} x_2 - x_1 & x_3 - x_1 \\ y_2 - y_1 & y_3 - y_1 \end{bmatrix} \text{ 考虑三维空间, 给}$$

其增添一维,并填充为 A' :

$$\begin{bmatrix} x_2 - x_1 & x_3 - x_1 & x_1 \\ y_2 - y_1 & y_3 - y_1 & y_1 \\ 0 & 0 & 1 \end{bmatrix}$$

由行列式在三维的几何含义

A' 相当于在 A 的形状上增添“厚度”,且“厚度”为1,因此

$$\therefore \det A' = \det A$$

$$\text{而 } \det A = \det A' = \det A'^T$$

$$A'^T = \begin{bmatrix} x_2 - x_1 & y_2 - y_1 & 0 \\ x_3 - x_1 & y_3 - y_1 & 0 \\ x_1 & y_1 & 1 \end{bmatrix}$$

$\therefore$ 对 A'^T 进行行倍变换不影响行列式大小,令 A'^T 1,2行加3行,并进行2次行对换.

得 $\det A'^T = \det B$ 其中 $B =$

$$\begin{bmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{bmatrix}$$

$$\therefore \det B = \det A$$

$$\therefore S_{\Delta} = \frac{1}{2} \left| \begin{vmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{vmatrix} \right|$$

4.1 3, 8, 11, 23

3. 比如向量 $\begin{bmatrix} 1 \\ 0 \end{bmatrix}$

$$1^2 + 0^2 \leq 1 \quad \therefore \begin{bmatrix} 1 \\ 0 \end{bmatrix} \in H$$

$$\text{对于 } c=2 \quad 2\begin{bmatrix} 1 \\ 0 \end{bmatrix} = \begin{bmatrix} 2 \\ 0 \end{bmatrix}$$

$$2^2 + 0^2 > 1 \quad \begin{bmatrix} 2 \\ 0 \end{bmatrix} \notin H$$

$\therefore$ 不满足 6, H 不是 $\mathbb{R}^2$ 子空间

8. 记集合为 A

P_n 的零向量为 0 多项式

任意系数全为 0, 显然在集合中

$$\text{对 } \forall q(t), p(t) \in A \quad q(0) = 0 \quad p(0) = 0$$

$$\text{则 } \begin{matrix} \text{对} \\ q(t) + p(t) \end{matrix} \quad q(0) + p(0) = 0 + 0 = 0$$

$$\therefore q(t) + p(t) \in A$$

$$\text{对 } \forall q(t) \in A \quad q(0) = 0 \quad \forall c \text{ 为常数}$$

$$\text{则 } c \cdot q(t) \quad c \cdot q(0) = c \cdot 0 = 0$$

$$\therefore c \cdot q(t) \in A$$

$\therefore A$ 为 P_n 子空间.

$$11. \begin{bmatrix} 5b+2c \\ b \\ c \end{bmatrix} = b \begin{bmatrix} 5 \\ 1 \\ 0 \end{bmatrix} + c \begin{bmatrix} 2 \\ 0 \\ 1 \end{bmatrix} = \text{span} \left\{ \begin{bmatrix} 5 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} 2 \\ 0 \\ 1 \end{bmatrix} \right\}$$

$$\therefore \mu = \begin{bmatrix} 5 \\ 1 \\ 0 \end{bmatrix} \quad \nu = \begin{bmatrix} 2 \\ 0 \\ 1 \end{bmatrix} \quad W = \text{span} \{ \mu, \nu \}$$

$\therefore \text{Span} \{ \mu, \nu \}$ 是 $\mathbb{R}^3$ 的子空间

(定理 1)

$\therefore W = \text{span} \{ \mu, \nu \}$ 是 $\mathbb{R}^3$ 子空间

23. a. X 的零向量是 $\mathbf{0}(t) = 0$

b. X 有向线段仅是用来表示向量的工具

c. X 还要满足向量加法与标量乘法封闭性.

d. $\cup$

e. X 离散或数字信号.

4.2 1. 6. 18. 26

$$1. Aw = \begin{bmatrix} 3 & -5 & -3 \\ 6 & -2 & 0 \\ -8 & 4 & 1 \end{bmatrix} \begin{bmatrix} 1 \\ 3 \\ -4 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$\therefore w \in \text{Null } A$

6. 对增广矩阵 $[A \ 0]$ 进行行化简

$$\begin{bmatrix} \textcircled{1} & 5 & -4 & -3 & 1 & 0 \\ 0 & \textcircled{1} & -2 & 1 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 & 0 \end{bmatrix} \begin{matrix} x_1, x_2 \text{ 为基本变量,} \\ x_3, x_4, x_5 \text{ 为自由变量.} \end{matrix}$$

$$\begin{cases} x_1 + 5x_2 - 4x_3 - 3x_4 + x_5 = 0 \\ x_2 - 2x_3 + x_4 = 0 \end{cases}$$

$$\begin{cases} x_1 = -5x_2 + 4x_3 + 3x_4 - x_5 \\ x_2 = 2x_3 - x_4 \end{cases}$$

$$\begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \\ x_5 \end{bmatrix} = \begin{bmatrix} -5x_2 + 4x_3 + 3x_4 - x_5 \\ 2x_3 - x_4 \\ x_3 \\ x_4 \\ x_5 \end{bmatrix}$$

$$= x_3 \begin{bmatrix} -5 \\ 2 \\ 1 \\ 0 \\ 0 \end{bmatrix} + x_4 \begin{bmatrix} 3 \\ -1 \\ 0 \\ 1 \\ 0 \end{bmatrix} + x_5 \begin{bmatrix} -1 \\ 0 \\ 0 \\ 0 \\ 1 \end{bmatrix}$$

$\therefore \left\{ \begin{bmatrix} -5 \\ 2 \\ 1 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} 3 \\ -1 \\ 0 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} -1 \\ 0 \\ 0 \\ 0 \\ 1 \end{bmatrix} \right\}$ 是 $\text{Null } A$ 的一个生成集

1a' 18 显然 $k=3$

(b) 显然 $k=4$

26. a. $\checkmark$

b. $\checkmark$

c. $X \text{ Col } A = \{b : b = Ax, x \in \mathbb{R}^m\}$

d. $\checkmark$

e. $\checkmark$

f. $\checkmark$
